

# Baja Creative Project

## About

Every year, mechanical engineering students design, build, test and race an off-road race car. Our team competes against other colleges and universities in a race styled after the Baja 1000, and a test of their engineering skill. The races take place in 3 rotating venues around the country.

## Selection Process

Preference is given to students who have taken the 492V 1 hour course as underclassmen and worked with the team.

Preference is also given to anybody who has racing, welding, or other automotive experience. Interested students are urged to get involved no later than their Junior year.

Typically twelve students will be selected for this project.
